PROFILE

Second-year Telecommunications Engineering student at Mehran University of Engineering & Technology (MUET), focused on networking, telecom systems and software. Comfortable across the stack — from RF fundamentals and protocol design to writing Python and C/C++ to automate and analyze network behavior. Seeking internship and entry-level opportunities in networking, telecommunications, or software engineering.

EDUCATION

Mehran University of Engineering & Technology (MUET)

Batch 2025

B.E. Telecommunications Engineering — 2nd Year | Jamshoro, Sindh, Pakistan

Cadet College Petaro

Completed

FSc (Pre-Engineering) | Petaro, Sindh, Pakistan

SKILLS

Networking: CCNA / Networking fundamentals, Linux, Telecommunications systems (GSM/LTE)

Programming: Python, C / C++, Data Structures

Tools: Git / GitHub, Cisco Packet Tracer, GNS3

PROJECTS

Campus Network Simulation

Packet Tracer, VLANs, OSPF

- Built a multi-VLAN campus network with inter-VLAN routing, ACLs, and a redundant core switch design.

Network Traffic Analyzer

Python, Scapy, Matplotlib

- Developed a live packet capture tool that classifies traffic by protocol and visualizes flow statistics in real time.

GSM Frame Structure Simulator

MATLAB, Signal Processing

- Simulated GSM TDMA frame timing and channel allocation, modeling how voice and control channels share the air interface.

Home Lab: Site-to-Site VPN

GNS3, IPSec, NAT

- Configured a two-router lab demonstrating a site-to-site IPSec VPN tunnel with NAT and basic intrusion monitoring.

Link Budget Calculator

Python, RF Basics

- Built a tool to compute link budgets for point-to-point microwave links, factoring in free-space path loss and fade margin.

CERTIFICATIONS

- CCNA: Introduction to Networks — Cisco Networking Academy (In Progress)
- Python for Everybody — Coursera (Completed)
- Introduction to Telecommunications — edX (Completed)
